CLINTON OKUMU

SOFTWARE ENGINEER

0113450756 | okumuclintl@gmail.com | https://portfolio-iota-puce-59.vercel.app/ | Nairobi, Kenya

OVERVIEW

Versatile software developer skilled in architecting backend systems, constructing RESTful web services, configuring database schemas, and orchestrating application integrations. Experienced with Python (Django), Golang, PostgreSQL, and Linux infrastructure, specializing in maintainable codebase standards, automated CI/CD pipelines, and resilient system architecture. Demonstrated history of engineering high-throughput microservices, troubleshooting live production issues, and safeguarding enterprise data flows.

EXPERIENCE

Technical Software & Systems Engineer | Pictus Labs | Nairobi, Kenya | 02/2026 - Present

- Administer and support live production software systems, analyzing application logs and database transactions to isolate runtime defects and edge cases.
- Collaborate closely with core engineering teams to test custom modules, validate API integrations, and review bug fixes prior to production release.
- Develop Python utility scripts to automate operational workflows, monitor data pipelines, and clean bulk datasets across multi-module systems.
- Manage environment access keys, token governance, and role-based permissions adhering to strict data security standards.
- Author technical runbooks, architecture notes, and root-cause analysis reports to support rapid incident remediation across services.

Systems & Web Developer | Uburu Multimove HS Non-Profit | Nairobi, Kenya | 08/2025 - 01/2026

- Engineered and maintained responsive web applications, optimizing server performance, asset delivery, and database query latency.
- Implemented secure API integrations with third-party payment gateways, managing webhook handlers and transaction verification routines.
- Deployed and maintained web services in Linux production environments, managing domain records, SSL certificates, and hosting uptime.

- Maintained backend database operations, executing schema migrations, data backups, and security access controls for organizational records.

Fullstack Developer Intern | Havalaa Technologies | Nairobi, Kenya | 01/2024 - 12/2024

- Build and document REST web services utilizing Python frameworks to deliver backend infrastructure for distributed web platforms.
- Structure database models in PostgreSQL and implement memory caching solutions to accelerate data retrieval under high load.
- Establish continuous integration and deployment pipelines, managing automated software testing and seamless server updates.
- Manage Linux server infrastructure, observing system utilization, service containers, and log files to ensure platform stability.

ICT Technical Intern | NACICO SACCO | Nairobi, Kenya | 05/2023 - 12/2023

- Resolving user-facing workstation, operating system, and application issues directly to maintain operational productivity.
- Configuring local network infrastructure components including switches, routers, and cabling systems to ensure stable network uptime.
- Maintaining endpoint protection through software patch management, virus signature updates, and automated system backups.
- Tracking IT hardware inventories and maintaining documentation for standard infrastructure procedures.

EDUCATION

B.S. in Business Information Technology | Mount Kenya University | Thika, Kenya | 2020 - 2023

Software Engineering Certification (Backend Focus) | ALX Africa | Remote | 2023 - 2025

Cisco Certified Network Associate (CCNA) | Cisco Networking Academy | Remote | 2024 - 2025

SKILLS

Backend & APIs: Python (Django), Golang, RESTful API development, Webhook architectures, Model Context Protocol (MCP), JSON integrations, Microservices ecosystem.

Frontend: React, TypeScript, JavaScript, responsive UI engineering.

Mobile Applications: React Native cross-platform engineering.

Databases & Caching: PostgreSQL, MySQL, Redis memory caching, relational database schema design, query latency tuning, automated schema migrations.

DevOps & Infrastructure: Linux server administration, Git version control, continuous integration & delivery (CI/CD), Docker container orchestration, application log analysis, infrastructure monitoring.

Security & Governance: Role-based permission policies, token authentication (JWT/OAuth), automated unit testing suites, technical system documentation, Kenya Data Protection Act compliance protocols.
